

Advanced Recycling of Co-mingled Metals

- Unique Russian crushers design allows life extension of vibratory cone crusher parts, thus improving the economics of crushing/size reduction operation.
- Electropulse/X-ray separators improve the quality of separation and economics of non-ferrous metal scrap recovery operations.
- Electronic equipment recycling line minimizes the potential generation of hazardous waste gases, ash, and/or landfill leachate and improves the economics for recovery/reuse of precious metals as well as nonmetals.

Commercialization Started

RUSTEC

Camden, NJ
